1-24 (canceled)

25. An electrochromic laminate made by placing sealing material around perimeter of an electrolyte sheet positioned on a first substrate, covering the sheet with a second substrate that extends over the sealing material, and subjecting both the electrolyte sheet and the sealing material to simultaneously applied heat and pressure.

26. An electrochromic laminate as in claim 25 which is impact resistant.

27. An electrochromic laminate as in 26 which reduces sound transmission at least 3dB.
